# Why Slug Sports?

Slug Sports is an app that allows you to arrange pick up games for a variety of sports at some of the many locations at UCSC. You will be able to meet new people who want to have fun while staying active, just like you!.

# Sprint 1: UI

High Level Goal: Create a working user interface

*As a user I need to be able to find the sport that I want to play so that I can look for other people who also want to play that sport.*

*As a developer I need to familiarize myself with Java and Android Studio in order to create a clean and functional interface.*

# Sprint 2: User Functionality

High Level Goal: Add basic features that will help users organize games

*As a user I want to way to see and track the people who have joined my game to prevent large numbers of people from showing up.*

*As a developer I need to incorporate the OPERS calendar within the application to help users plan their games and prevent conflicts.*

# Sprint 3: More User Features

High Level Goal: Add more features that will enhance the user's experience

*As a user I want to have a comment system so that communication with others becomes easier.*

*As a user I want to have a map of the UCSC Campus so I can see where the fields and courts are located.*
