## glen William Herrera

If it weren't for Glen I wouldn't have been in a group when I got to class on Thursday. He made the initial post on the forums that lead to my group being formed and I appreciate how proactive he was forming the group. Improvements: It is to early for me to know what Glen needs to improve on.

He was the first to show up to the group meeting today and he was well prepared with his laptop and notes. He also is the one person in the group that took initiative to turn in the github accounts and he made a doodle in the group chat so we could see when we are all available for group meetings. I think he could improve by speaking up a little more in group discussions because I think he has good ideas. It would also be good to know what his actual name is.

He created the Github repository for the team, invited the TA to have access to the repository, and sent the team member list to the TA. All of these are really beneficial to the team and he volunteered to do them.

## Robert Daniels

Daniel has been putting a lot of input into the idea and has been one of the biggest contributors to our facebook group. I like that he is putting a lot of time and thought into our project, especially this early on. Improvements: It is to early for me to know what Daniel needs to improve on.

He was quick to respond to messages on the group discussion. He was flexible in terms of meeting times. Robert offered some good ideas for the project as well as other alternatives.

I like that Daniel has been very on top of communication so far, he has responded to team member's questions quickly and I believe he set up the facebook group chat orginally.

## Sean Mendenhall

Sean Mendenhall, 20: Sean was the first start looking at ideas for our project. When we were first meeting up he immediately pulled out his laptop and started getting into it. I'm glad to see that he is excited to start working on this. Improvements: It is to early for me to know what Sean needs to improve on.

Like: Sean was quick to catch up on information that he missed in the meeting. Improve: Sean did not respond to posts until much later.

I liked that he was excited about the project and was involved in the group discussion in class. I disliked that he did not answer with his email and github account on our group chat and did not show up to the meeting the next day. However, this is all fixable; I don't think he knew about the group chat. When he finally saw the message he responded with his account information and agreed that our idea for the group project looked good.

### Rahul Patel

Right when the group was formed Rahul found everyone on facebook and started a facebook group. Because of this we were able to start planning and communicating right away. Improvements: It is to early for me to know what Rahul needs to improve on.

Rahul was also quick to respond to messages that were posted to the group chat. He was responsible for organizing the group on Facebook and did the task quickly.

I liked that he was easy to work with and took initiative to add everyone on facebook and create a group chat so that we would all be organized. He came prepared to the meeting today and we used his laptop to read the project ideas and do research. I think that he could improve by making sure to do the readings before he comes to the meeting. I know he bought a book but is still waiting for it to get delivered so this should be fixed in no time.

Rahul came up with the Team name, which rocks! He also was very outgoing when the group was forming, which helped!

### Max Kerscher-Santelli

Like: Max was helpful with finding group members during Tuesday's class. Improve: Could be more active on the group chat.

he contributed to starting the group and was a big part of the group discussion in class. However, like Sean he did not see the group chat in time to respond with his github account and email and he did not show up to the group meeting. He also saw the messages once it was too late but eventually responded to agree on the group project idea.
